

The Kampfpanzer expansion adds all the counters from the old MOVES article, as well as Polish and Italian units. The counter mix includes Soviet, Polish and French cavalry. I've completely redone the Soviets as the old Black/White combination wasn't very good. There are several corrected values – the Soviet BT-7 is given the 45mm gun rather than the 76mm gun in the current countermix (makes a difference!). The PZIV is now rated an H weapon type and the PZIIIIf (with a 37mm gun) is given to correct the 50mm gun in the current countermix. Also threw in mortars and MGs.

The Desert War expansion adds more Italian units and older British tanks. It also adds US units for Tunisian scenarios.

The German and Soviet Pz44 Expansion units are a complete stand-alone set covering the Eastern Front from 41 to 45.
